Ekahau Plan

Design and optimize wireless networks for seamless connectivity

Professional-Grade Tools for Every Stage of the Wi-Fi Lifecycle

DESIGN + OPTIMIZE

Proper wireless design is fundamental for deploying and maintaining mission-critical networks. Ekahau Plan gives network designers, planners, and architects the specialized tools they need to engineer high-performance Wi-Fi and automate optimizations—without paying for on-site survey hardware and features they don't use.

Drive Value Through High-Precision Design

Ekahau Plan enables network engineers and architects to focus where they deliver the most value—predictive modeling, capacity planning, and network optimization. By leveraging field data gathered by local teams, designers can produce accurate, high-quality Wi-Fi designs without spending critical hours on-site collecting survey data.

Accelerate Design Velocity

Streamline complex Wi-Fi modeling using automated wall detection, intelligent AP placement algorithms, and predefined coverage requirements. Designers can generate client-ready network plans, heatmaps, and Bills of Materials (BoMs) in a fraction of the time.

Ease Budget Approvals and Scaling

Expand design resources affordably with pure software licenses—no hardware required. Replacing heavy CapEx with predictable OpEx speeds budget approvals, while remote modeling eliminates engineer travel expenses entirely.

LICENSE INCLUDES

- Ekahau AI Pro
- Ekahau Optimizer
- API Integration
- Cloud Project Sync
- Product Updates & Support

PERFECT FOR

Network designers, planners, and architects requiring professional Wi-Fi design and optimization capabilities without on-site survey needs.

COMPLETE YOUR TEAM

Pair with Ekahau Measure Pro or Ekahau Software Suite to add live Sidekick 2 measurement capabilities and achieve full Wi-Fi lifecycle coverage. On-site staff capture accurate Wi-Fi data, while design engineers leverage that data to drive high-level design, optimization, and analysis.

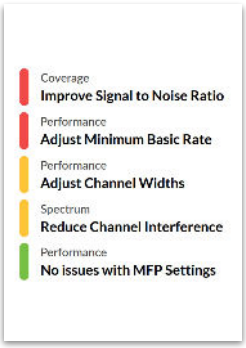
Unlock Powerful Ekahau Features with Survey Data

Pair Ekahau Plan with Ekahau Measure Pro or Ekahau Software Suite to add live Sidekick 2 measurement capabilities and achieve full Wi-Fi lifecycle coverage.

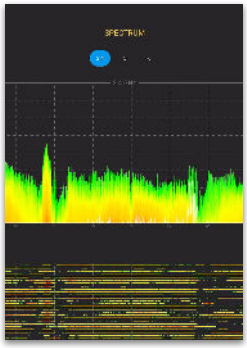
Design with Precise RF Models

Enable data-driven Wi-Fi design across global teams without expensive site visits or travel. On-site staff capture real-world RF data and sync it seamlessly to the cloud—giving remote engineering teams the exact insights needed to build precise 3D RF models, simulate AP upgrades, and create high-performance network plans.



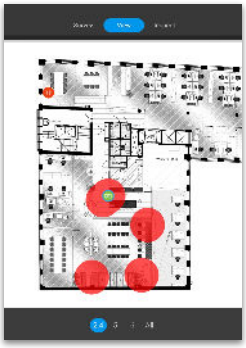
Automate Performance Audits & Optimization

Streamline continuous network maintenance across your sites. Once local staff collect and sync field survey data, automated audits analyze network health and generate step-by-step action plans to optimize AP configurations and validate performance improvements remotely.



Live Spectrum Analysis

Network degradation directly impacts business productivity. With live RF spectrum analysis and troubleshooting tools in the palm of your hand, local staff can quickly pinpoint, diagnose, and clear Wi-Fi interference before user connectivity and daily operations are disrupted.



Pinpoint Security Vulnerabilities

Uncover hidden security risks before they can be exploited. Conducting regular surveys with Sidekick 2 automatically detects and locates unauthorized rogue access points, weak encryption, and unapproved connected devices (like smart TVs or printers).

Compare SaaS Plans

	Ekahau Plan	Ekahau Measure Pro	Ekahau Software Suite
Predictive Wi-Fi design with 2D and 3D floor plan visualization	✅	✖	✅
Optimize live networks with step-by-step action plans	✅	✖	✅
Survey and collect 2.4, 5, and 6 GHz measurement data with Sidekick 2	✖	✅	✅
Tri-band spectrum analysis with Sidekick 2	✖	✅	✅
Multi-channel wireless packet captures	✖	✅	✅
Live remote heatmaps and analysis	✅	✖	✅
Client-ready reports, Bills of Materials (BoMs), and view-only sharing	✅	✖	✅
Work offline with non-cloud tools	✅	✅	✅
Software product updates & support	✅	✅	✅
